## “Electro-Pneumatic” Control Panel For Tyre Curing Press

We 'NEXUS ELECTROMECH' expertise in supplying a wide range of the industrial electrical control panel, Instrumentation and Automation work. We are in the field of Electro-Pneumatic panel specifically for Tyre Curing Press Control Panel, that is suitable for Curing Room Equipment. Our range of control panel is appreciated for superior performance and longer functional life. Moreover, the control panels are made available in the different specification with to give best value satisfaction to clients.

Whether measured from a business, commercial or technical perspective, a curing press solution from NEXUS ELECTROMECH can help improve overall press productivity. An integrated control solution in control panel can also help decrease changeover time, and pre-programmed recipe parameters can improve production time and reduce waste.

What may start out as an “order-by-order” relationship, can eventually develop into a mutually beneficial business partnership because we strive for a comprehensive approach that focuses on your machine and business performance. We can work with you to develop a solution that gives you a competitive advantage throughout your machine’s life cycle.

From the curing control panel HMI to the line supervisory, plant and business enterprise levels, the information system seamlessly links with the Logix controllers to provide the data needed to monitor the tire curing process, create realistic production schedules, improve overall equipment effectiveness (OEE), and track tire production.

Let NEXUS ELECTROMECH be your control panel solution experts in tire curing. Helping your business succeed and grow is what we do best, with power, control and information solutions designed to give you a competitive advantage. Our in-depth understanding of the policies and requirements affecting you can help you reduce business risk, improve operational efficiency and achieve faster time to market.
